

The measurement layer for the *physical world*.

Hardware-verified environmental data infrastructure. Sensor nodes sign every reading in silicon and anchor it on-chain. **Carbon proved the pipeline; nine verticals scale it.** Operator economics run on USDC validator fees from commercial buyers of hardware-signed data. Every figure ties to unit economics published at launch.malamalabs.com.

2,786+	\$39M	Year 3	16,000
SAVECARDS ON-CHAIN SINCE JUN 2024	BASE-CASE Y5 REVENUE	EBITDA POSITIVE (BASE CASE)	BASE-CASE Y5 NODES

REVENUE — THREE LINES (\$, BASE)

LINE	2026	2028	2030
Protocol take (validator fees)	27K	2.6M	25.4M
Hex license (new nodes)	316K	3.7M	13.0M
Hardware margin	19K	219K	760K
Total revenue	361K	6.6M	39.1M

Protocol take of USDC validator fees grows from a rounding error to the dominant line as commercial demand matures.

P&L — BASE (\$)

LINE	2026	2028	2030
Revenue	361K	6.6M	39.1M
Payroll	(1.4M)	(4.2M)	(7.0M)
Non-payroll opex	(108K)	(2.0M)	(11.7M)
EBITDA	(1.1M)	413K	20.4M

EBITDA positive Year 3. Margin reaches 52% by Year 5.

CAPITAL — PUBLISHED

\$2,000 per Hex Node (\$380 hardware + \$1,620 license). Genesis 200 = 195 external + 5 reserved, a **\$390K** external raise. Hardware ships end Dec 2026; mainnet Q4 2026.

SCENARIOS — Y5 VALUATION

BEAR • 7K NODES • \$12M REV	\$118M
BASE • 16K NODES • \$39M REV	\$469M
BULL • 28K NODES • \$103M REV	\$1.54B

At 10x / 12x / 15x revenue. Scenarios differ on adoption pace, not unit economics.

NINE VERTICALS — INDEPENDENT DEMAND

CARBON DMRV	AI COMPUTE EMISSIONS	PARAMETRIC INSURANCE
ENERGY / GRID	EUDR SUPPLY CHAIN	PREDICTION ORACLE
SMART AGRICULTURE	SMART CITY / GRID	LCO ₂ / VCO ₂

Validator-fee revenue comes from commercial buyers across nine verticals, each with its own regulatory driver. No single market carries the model.

WHY IT HOLDS

License and hardware revenue bootstrap the network. Validator fees compound as data finds buyers. The base case crosses profitability in Year 3 on conservative per-node revenue (\$420/mo by Y5, in line with the published DOCS-07 worked example).

▲ STAGE-HONESTY

Validator-fee revenue is nascent during Genesis. Figures are scenario estimates on published unit economics, not bookings or distribution guidance. MLMA is a digital tool under SEC-CFTC S7-2026-09, not a security.
